Epic HILIC-FL HPLC Columns

Epic HILIC-FL is useful for retention and separation of polar and non-polar compounds that are not retained or conventional reversed phase columns. separated on Reversed-phase HPLC is widely used for separation of many pharmaceutical compounds. However. retention separation of many polar analytes has proven to be a challenge. Many of these types of compounds are unretained or poorly retained on most conventional reversed-phase stationary phases, such as ODS. Fortunately, to deal with of analytes an alternative chromatography can be utilized using polar stationary phases highly organic mobile phases. This chromatography has been utilized for many years and is referred to as "hydrophilic interaction chromatography" or HILIC. HILIC chromatography uses mobile phases containing between 5 - 20 % water for the retention of polar compounds.

APPLICATION NEWS

Epic HILIC-FL HPLC Columns

Epic HILIC-FL is a new stationary phase for HILIC chromatography. It consists of a fluorinated based stationary phase bound to silica. This composition provides for excellent retention/peak shape for polar

Detection:

uv@ 210nm

Sample:

1. MDA

2. Amphetamine

3. MDMA

4. Methamphetamine

halogenated, polar amines and polar aromatic compounds. Many of the commercially available HILIC stationary phases are converted normal phase columns. These normal phase columns yield poor methods, poor separations and lack durability. Epic HILIC-FL is specifically designed for HILIC chromatography and can achieve high performance separations, yield rugged methods and deliver long column life times. Epic HILIC-FL is an excellent choice for samples containing polar halogenated, polar amines and polar aromatic compounds were superior retention and peak shape is essential. The amphetamines chromatogram shown here is an excellent example of separation efficiency provided by Epic HILIC-FL.
