GreenSep™ Nitro SFC Columns

GreenSep™ Nitro - Supercritical fluid chromatography (SFC) is a powerful chromatographic technique for the separation of complex mixtures. It has been useful in several aspects of chromatography including preparative and rapid analysis. Many SFC separations have been forced to utilize older types of stationary phases from "normal phase" HPLC such as unmodified silica, diol, amino and cyano. These phases are poorly adapted to SFC and present a number of limitations for SFC separations. Limitations include: low capacity, poor selectivity, and poor peak shape for SFC separations.

At ES Industries we have developed a new line stationary phases, GreenSep SFC specifically engineered for SFC separations, one of these phases is GreenSep Nitro SFC. GreenSep Nitro SFC stationary phase has proven superior to conventional stationary phases (such as diol, cyano etc...) in the areas of separation selectivity and loading capacity. The chromatogram shown below is a prime example of the separation selectivity obtainable with the GreenSep Nitro SFC column. GreenSep Nitro SFC is specifically designed for the separation of geometrical isomers as well as diastereomers. It is the column of choice in separating compounds that contain an aromatic group, polarizable electrons, halogenated groups and conjugate systems. GreenSep Nitro SFC is unsurpassed for its separation capabilities and is available in analytical columns, preparative columns and bulk media.

GreenSep™ Nitro 3 micron SFC Columns

Supercritical fluid chromatography (SFC) is a powerful chromatographic technique for the separation of complex mixtures. It has been useful in several aspects of chromatography including preparative and rapid analysis. Many SFC separations have been forced to utilize older types of stationary phases from "normal phase" HPLC such as unmodified silica, diol, amino and cyano. These phases are poorly adapted to SFC and present a number of limitations for SFC separations. Limitations include: low capacity, poor selectivity, and poor peak shape for SFC separations.

At ES Industries we have developed a new line stationary phases specifically engineered for SFC separations, one of these phases is GreenSep Nitro. GreenSep Nitro SFC stationary phase has proven superior to conventional stationary phases (such as diol, cyano etc...) in the areas of separation selectivity and loading capacity. The chromatogram shown below is a prime example of the separation selectivity obtainable with the GreenSep Nitro SFC 3um column. GreenSep Nitro 3um is specifically designed for the separation of geometrical isomers as well as diastereomers. GreenSep Nitro 3um is ideally suited to high performance/high speed SFC preparative chromatography applications. GreenSep Nitro offers the chromatographer greater flexibility in developing separation. GreenSep Nitro 3um is an SFC column ideally suited for the retention and rapid separation of chemicals containing structurally similar groups. GreenSep Nitro 3um can easily replace conventional stationary phases used in SFC and deliver superior performance.

It is the column of choice in separating compounds that contain an aromatic group, polarizable electrons, halogenated groups and conjugate systems. GreenSep Nitro SFC 3um is unsurpassed for its separation capabilities and is available in analytical columns and preparative columns.
